VICTOR NWACHUKWU

Software Engineer | AI, Data & Business Automation
Nigeria | storm@beyndtech.com | +234 808 694 1101
storm.beyndtech.com | github.com/storm-beyndtech

PROFILE

Software engineer experienced in backend systems, data processing, API integrations and operational software. Builds reliable applications for complex business workflows, with experience in risk analysis, transaction validation, real-time systems and product delivery.

TECHNICAL SKILLS

Languages & data: Go, TypeScript, JavaScript, SQL, PostgreSQL, MongoDB
Backend: Node.js, NestJS, Express, REST APIs, WebSockets, data pipelines
Product: React, Next.js, Tailwind CSS, responsive UX, Docker, CI/CD, testing
Automation & analysis: API workflows, data validation, transaction analysis, MCP

PROFESSIONAL EXPERIENCE

Founder & Lead Engineer | RugBurn (Beyndtech Arc Ltd) | 2025-Present

- Built and operate a production risk-intelligence platform with Go, PostgreSQL, Next.js, APIs, MCP tooling and messaging bots.
- Processed 32,000+ forensic scans; built pipelines to examine transaction patterns, funding relationships and behavioral anomalies across noisy datasets.
- Revised risk methodology after calibration exposed limitations in an earlier model.
- Designed inspectable evidence records and investigation workflows.

Founding Product Lead / Product Engineer | Nakupenda | Dec 2025-Present

- Lead product and frontend systems for a public-beta social platform, including messaging, live rooms, publishing, governance and monetization workflows.
- Build responsive Next.js/React interfaces with shared design-system constraints.

Technical Instructor & Software Engineer | Pearlcity Hub | 2024-2025

- Developed web applications with TypeScript, React and Node.js; taught full-stack engineering through deployable, end-to-end projects.

Software Engineer | Spyder Dev (Freelance) | 2021-2023

- Delivered frontend and backend features for client software, primarily a healthcare platform, on TypeScript-based stacks.

OPEN SOURCE & ECOSYSTEM

- Merged Stellar ecosystem backend work involving transaction idempotency and SEP-6 anchor-response validation/reconciliation; merged real-time escrow event infrastructure to Trustless-OSS.
- Built an open-source Solana risk and compliance skill with reproducible workflows and QuickNode x402 integration; received QuickNode startup credits.
- Superteam Agentic Grant recipient for Augur, a pre-outcome verification layer.
- Twice placed fourth in the BirdEye On-Chain Intelligence Hackathon.
- Delivered a paid product-design engagement for Trustless Work via GrantFox.

SELECTED SYSTEMS

Dash NG Shop - Multi-role commerce operations across inventory, orders and payments.
Rasman - Music commerce, playback, purchase and entitlement workflows.
SangoLabs - Nigerian-language data pipeline with agreement scoring; Go and Next.js.
Seametry - Solana devnet creation/redemption infrastructure and Go issuer evidence.
